

AMENDMENTS TO SPECIFICATION

Please insert the following paragraph in its entirety after paragraph number [25] of the application (paragraph [25] was added in the previous response filed on January 19, 2006):

[26] Fig. 6 shows a mode-switching transformer according to another embodiment of the present invention.

Please replace paragraph number [40] of the application with the following paragraph in its entirety:

[40] According to a second embodiment shown in FIG. 6, the capacitor C is located in the center of the spirals forming sections 5' and 6'. So, the connection of its armature to section 6' does not require a bridge. Another advantage is that it minimized the global size of the transformer.
